- » Cloud enablement

OVERVIEW

Talliance provides a blended approach, using offshore software development and support teams together with your onshore resources. This means that development requirements are captured with crucial local business understanding, and our partners know that the work meets both specifications and business objectives. Our services group acts as an extension of your team, supplementing your in-house development resources to help you overcome skills, time, and cost restraints. Our partners leverage our core development skills in Microsoft, and Open source technologies to help their end-users achieve their business goals.

So whether you require skill sets in .NET, MSSQL, PHP/MySQL, Linux, Ajax or Oracle or any other current technology our team is ready to perform to the highest standards. We support all phases of the software development lifecycle based on agile and iterative practices from planning, design and architecture, through to development, testing and deployment.

World-class brands that Talliance supports through its partners...

The BodyShop

Our software helps manage thousands of BodyShop products and multilingual promotions, customized for individual countries.

BMW Asia

Our software powers the BMW training portal from dissemination of training material to assessment. Multimedia, secure, and fast.

eVogue

Ecommerce software for high-end luxury brands with advance CRM, developed on Magento enterprise platform.

VuePrivee

Limited editions of art prints, software to manage inventory, catalogue, order fulfillment, ecommerce, and loyalty program.

Lenovo

Marketing information portal for the channel partner network. A rescue project by skilled code analysis and repurposing.

STRENGTHS

- » Tailored application development - We have significant experience in providing customised systems for enterprise. Starting with an overview of the big picture, taking into account business goals and the scope and limitations of existing systems, we source the best solution for the client. We cover all aspects of the software development cycle.
- » Ecommerce Systems - We have deep understanding of creating appealing & feature-rich store fronts across various business segments from beauty-care to art reproductions, high-end fashion, & gourmet tea. We've built ecommerce systems from the ground up & have customised shopping cart systems from CS Cart, Pinnacle, & Magento. Our domain understanding embraces cataloguing, shopping cart, payment gateways, order fulfilment, loyalty schemes and customer management.
- » Content Management Systems - We have developed enterprise content management systems, on behalf of our partners, for oil refineries, luxury car manufacturers and global computer manufacturers and sports businesses. Some of these systems were built from scratch, while others used customised content management systems from Wordpress, Joomla and Drupal. Our domain understanding spans authoring, publishing, life cycle management, workflow and user management.
- » Project support and rescue - Talliance understands the value of ongoing dedicated support. In most cases, all that is needed is a regular check-in to assess how effectively software resources are performing, and whether any upgrades are needed. This is part of the Talliance service, ensuring optimal performance long after the initial installation of a technology solution. Sometimes, extra help is needed to get projects back on the right path. This is an area of our work that requires a global overview of the problem. We have successfully rescued several significant projects through skilled code analysis and repurposing. These interventions have extended the life of the software and enhanced it for new business requirements – a winning result for all concerned.
- » Website development and build - Our expert developers and designers are adept at quickly creating successful, business-ready websites that meet all current standards and take into account the web's rapidly changing interplay with new devices and platforms. From iPad apps to the mobile web, we have the answers.
- » Cloud solutions - Increasingly, we are asked for help by our partners to adapt to the new possibilities presented by the cloud. We sort through the complex options around the cloud, including the benefits and risks of public and private cloud models and the various cloud hosting providers. For scalability and flexibility, you can't do better than to consult Talliance about cloud opportunities.
- » Application Integration – We work with our partners to help clients to build bridges between systems. We analyse the workflow and processes requirements and integrate to create end-to-end solutions.
- » IT Support - Talliance also has a team of support engineers available to you and your clients. As partners you will be able to offer new services and enter new markets such as infrastructure support and maintenance of existing applications and hardware environments that are used to host the applications.

WHY CHOOSE TALLIANCE

We make it our business to gain a thorough understanding of your business challenges and those of your customers. Whatever the project, however complicated, our tried and tested processes will enable you to deliver it to your client on time. A core aspect of our service is flexibility and willingness to adapt as needs change. And you can rest in the knowledge that all solutions are thoroughly researched and tested before implementation.

At Talliance, we have amassed an impressive portfolio of successful enterprise class projects in demanding locations, building robust software systems with up-to-date tools and platforms. We have solid experience in a range of verticals, including fashion, beauty-care, food and beverages, automotive, technology and logistics. Because, through our partners, we have worked with globally renowned brands and have a strong appreciation of how these industries work, we can quickly take on high-level software engineering responsibilities, adding value with best practices and knowledge of important trends.
